The Semantic Web For Knowledge And Data Management Technologies And Practices

semantic web - w3c - the term "semantic web" refers to w3c's vision of the web of linked data. semantic web technologies enable people to create data stores on the web, build vocabularies, and write rules for handling data. linked data are empowered by technologies such as rdf, sparql, owl, and skos. **introduction to semantic web technologies & linked data** - semantic web technologies a set of technologies and frameworks that enable the web of data: resource description framework (rdf) a variety of data interchange formats (e.g. rdf/xml ,n3 ,turtle ,n-triples) notations such as rdf schema (rdfs) and the web ontology language (owl) all are intended to provide a formal **introduction to the semantic web - world wide web ...** - 1 introduction to the semantic web (tutorial) 2009 semantic technology conference san jose, california, usa june 15, 2009 ivan herman, w3c ivan@w3 **semantic web and the libraries: an overview** - their semantic web activity pagew3c states : "the idea of having data on the web defined and linked in such a way that it can be used by machines not just for display purposes, but for automation, integration and reuse of data across various applications. **knowledge representation for the semantic web** - p. hitzler, m. krötzsch, s. rudolph: knowledge representation for the semantic web, ki 2009 semantic-web-book 3 what is a rule? • logical rules (predicate logic implications) **a brief introduction to the semantic web - wikiworks** - "semantic web" means different things to different people. semantic information on the web can be expressed in three different ways: 1. inferred 2. free-form tagging 3. structured data these go in order from the consumer of data doing most of the work, to the producer of data doing most of the work. **introduction to the semantic web** - introduction to the semantic web before going deeper into our technologies, expertise and so on, we need to have a basic idea of the main concept behind them. this concept is used everywhere in our documentation - "semantic". for example, "ontotext is a leading developer of core semantic technologies". so, what do **querying the semantic web - csonybrook** - @ semantic web primer sparql basic queries sparql is based on matching graph patterns: the simplest graph pattern is the triple pattern like an rdf triple, but with the possibility of a variable instead of an rdf term in the subject, **which semantic web? - csdl.tamu** - the semantic web writ large, the view that holds it to be the resource of personal agents forming the backdrop for a latter-day knowledge navigator. 2.1 taming the web one of the early visions of the semantic web arose as a reaction to the disorder of the web. the web was and is not ordered in a **ontology learning for the semantic web - computer science** - the semantic web ontology learning for the semantic web alexander maedche and steffen staab, university of karlsruhe the semantic web relies heavily on formal ontologies to structure data for com-prehensive and transportable machine understanding. thus, the proliferation of ontologies factors largely in the semantic web's success. **the semantic web - inria** - semantic documents and ... for the semantic web to function, computers must have access to structured collections of information and sets of inference rules that they can use to conduct automated reasoning. artificial-intelligence researchers have studied such systems since long before the web was developed. **what happened to the semantic web?** - the promise of the social-semantic web •the semantic web as the ideal platform for distributed social networks and social media •connect digital identities across networks (sameas) •connect distributed conversations across networks •having a profile in one network, and linking it to content elsewhere **semantic web application areas** - semantic web-enabled web services which will help to bring the semantic web to its full potential 1. introduction the world wide web (www) has drastically changed the availability of electronically accessible information. the www currently contains some 3 billion static documents, which are accessed by over 300 million users internationally.
